REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The 35 USC 103 rejection set forth in the previous Office Action relies upon Messerle et al (1996) and Kemble et al (1996) to arrive at the claimed vectors and methods. Messerle et al teach two BACs that when used together in the same cell provide the claimed features, and Kemble et al teach the entire 230-kbp CMV genome arranged on eight cosmids which are all linearized, transfected, and then concatamerize into a molecule that closely mimics, or may be a near identical replica of, the CMV genome within the eukaryotic cell (see e.g. Fig. 1a of Brune et al, 2000, of record). Thus, applicants assertions that the methods of Kemble et al do not produce a CMV genome are unconvincing. However, the withdrawal of the 35 USC 103 rejection is not reliant upon applicants arguments. The proposed combination of Messerle and Kemble et al appears to have been attempted by the disclosure of Messerle et al, but did not result in the claimed vector as set forth above. That is, Messerle et al teach an attempt to incorporate a circular or concatamerized (i.e. the same type of genome taught by Kemble et al) CMV genome into a single BAC vector, but failed to do so. Furthermore, the evidence and reasoning set forth in the declarations by Drs. Koszinowski and Messerle regarding the difficulty in applying prior art methods of cloning large (e.g. > 100-kbp) DNA fragments are an apt summary of the state of the art at the time the instant application was filed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
